Professional Summary

Full Stack Engineer with extensive experience in architecting complex systems, microservices, and RESTful API integrations. Specialized in end-to-end development using **.NET Core / .NET 10**, **Node.js**, **React 19**, and **Angular 18**, with expertise in incorporating AI tools, agentic workflows, and automation to streamline engineering practices. Strong product vision focused on DevEx and UI/UX, with a proven track record of effective Agile collaboration in cross-functional team environments.

Technical Skills

Backend	.NET Core / .NET 10, ASP.NET Core, C#, Node.js, NestJS, FastAPI (Python), RESTful APIs, Microservices, Entity Framework Core
Frontend	React 19, Vite, Next.js, Angular 18, TypeScript, JavaScript (ES6+), HTML5, CSS3/Tailwind, Responsive Design, UX/UI
AI & LLM Integration	Multi-Provider LLMs (Claude, Gemini, DeepSeek-R1, Ollama), Call-Site Routing, Structured Output / JSON Schemas, Agentic Workflows, Fallback Pipelines, Prompt Engineering
Databases	SQL, PostgreSQL, NoSQL, ORM Mapping, Data Provenance & Auditing
DevOps & Infra	Docker & Docker Compose, Caddy Reverse Proxy, VPS Deployment, Git, GitHub, CI/CD Pipelines, Swagger/OpenAPI
Methodologies	Agile, Scrum, Greenfield Architecture, Domain-Driven Concepts
Languages	Hebrew (Native), English (Proficient)

Work Experience

Software Developer (Core Developer) | MATRIX (Bank Mizrahi-Tefahot)

2025 – Present

- **API Discovery & Automation Platform:** Led the end-to-end greenfield development of a core enterprise platform for bank-wide API mapping and management. Built using NestJS and Next.js, replacing SwaggerHub and incorporating AI agents to boost workflow efficiency.
- **Developer Experience (DevEx) & Tooling:** Developed dedicated tools enabling non-technical stakeholders to create and edit API specifications without writing code, significantly shortening organizational development cycles.
- **System Visualization:** Built a discovery engine to visualize complex architectural relationships between core banking systems, backend services, and frontend applications.
- **Quality Assurance & Standardization:** Implemented strict validation logic, automated object mapping, and direct Swagger (OpenAPI) integrations to prevent human errors and guarantee interface reliability.
- **Technical Documentation:** Authored comprehensive OpenAPI (Swagger) specifications defining complex data structures and request/response schemas.
- **Cross-functional Collaboration:** Partnered closely with System Analysts, Architects, and Development teams to translate complex business requirements into precise technical solutions.

Technical Support & Web Developer | KONIMBO

2024 – 2025

- Provided advanced technical support, initiated performance optimizations, and enhanced system efficiency across core e-commerce platform components.
- Performed custom web development using JavaScript, HTML5, and CSS3.
- Enhanced user experience (UX/UI) and tailored web interface capabilities to client requirements.

Digital Manager & Technical Specialist | MEDICAL MEDIA

2021 – 2024

- **Promotion to Management:** Promoted from Technical Specialist/Support to Digital Manager within one year based on technical achievements and innovation leadership.
- **Automation & Project Management:** Led technical projects, engineered automated workflows for landing pages and digital communications, and directed data-driven campaigns.
- **Technical Training & Onboarding:** Instructed cross-functional teams and management on adopting and utilizing advanced technology platforms.

Notable Projects

AI-Driven Investment Decision & Research Platform

- **Architecture & Production:** Designed and deployed a live microservices production. Built with React 19 + Vite, ASP.NET Core (.NET 10), FastAPI, and PostgreSQL, containerized with Docker Compose behind a Caddy reverse proxy on a VPS.
- **Deterministic-First AI Architecture:** Engineered a rule engine calculating all numerical decisions strictly with cross-validation between Python and .NET. Integrates a multi-provider LLM layer (Claude / Gemini with call-site routing) providing structured narrative outputs only, guarded by JSON schema enforcement, repair-retry mechanisms, and deterministic fallbacks.
- **Simulation, Learning & Data Provenance:** Developed a paper-trading execution pipeline incorporating risk gates, cost models, and benchmark performance tracking across nine time horizons. Implemented engine versioning and database-enforced DecisionPath tagging for complete execution audits and historical reconstructability.

Education

Full Stack Development Course | John Bryce College

2024 – 2025

Comprehensive training in full-stack web application development: .NET Core, Angular 18, React, Node.js, EF Core, SQL/NoSQL, and RESTful APIs.

Practical Software Engineer (Handasai) | ORT Hermelin College

2021 – 2024

Specialization in Full Stack systems architecture, modern development methodologies, and Object-Oriented Programming (OOP).

Military Service

Paratrooper (Infantry Battalion, Unit 101) | Rifleman 07 | IDF (2014 – 2017)
